1 What's a White Paper?

In the IT community, a White Paper is an informational brief offering an overview of a technology, product, issue, standard, policy, or solution - its importance, use and implementation, and business benefits. With the growth of the Internet as a fast and easy vehicle for distribution of information, White Papers have emerged as the standard way of communicating more in-depth information to IT and business decision-makers in terms of problems solved and markets addressed - the key criteria for product selection.

At ITpapers, you'll find White Papers that...

- clarify the broad outlines of an issue to non-specialists
- summarize the implications of a new technical or business development
- introduce a new technology to general IT business readers
- stake out a company's approach to a particular issue or market
- set out basics of a technical or business issue
- educate technology readers

At ITpapers, you won't find...

- documents that serve solely a promotional function
- product and sales brochures
- data or spec sheets
- promotional press releases

To be listed on ITpapers.com, White Papers must meet a few basic guidelines:

1. The White Paper must be IT-related (in broad terms).
2. The White Paper must contain information of current interest to the IT community, beyond promotion of a single product or line of products. (We don't list purely promotional documents.)
3. The White Paper must be freely available on the web. We don't list papers you have to pay to view, but we do list papers at free sites which require registration.

The White Paper must be available online in HTML, PDF, Postscript, Word, or text format.
